

Investment Proposal: Wildshakes Proprietary "Nexus" System

Prepared by: Clyde Lian Granada, Lead Developer

Objective: Deployment of a Custom-Built Multi-Branch POS & Integrated Web Ecosystem

Investment Type: One-Time Development & Deployment Fee

Total Investment: ₱60,000 (Full Ownership)

1. Executive Summary

This proposal moves Wildshakes away from "renting" business tools. By building a **custom, proprietary POS system** and an integrated website, Wildshakes eliminates recurring monthly SaaS fees (saving approx. ₱36k–₱60k per year). This system is designed specifically for Mindanao's unique operational needs, focusing on high-speed local processing and investor-grade reporting.

2. Project Deliverables (One-Time Payment)

A. Custom Wildshakes POS (Multi-Branch)

- **Proprietary License:** The software is owned 100% by Wildshakes. No monthly subscriptions.
- **Multi-Location Hub:** Centralized database allowing the owner to monitor Davao, GenSan, or CDO branches from one admin panel.
- **Smart Inventory:** Automated ingredient-level tracking (e.g., deducting "Milk Powder" and "Pearls" in real-time for every transaction).
- **Offline-First Architecture:** Orders are processed locally (even without internet) and auto-sync to the cloud once a connection is detected.

B. Integrated Enterprise Website

- **Zero-Commission Ordering:** A custom web portal where customers order directly. Unlike FoodPanda/Grab (which take 20-30%), 100% of the revenue stays with Wildshakes.
- **Investor Dashboard:** A private, secure portal for stakeholders to view Live Sales, P&L (Profit & Loss) summaries, and staff performance logs.
- **Automated Backups:** Daily database snapshots stored on a secure private server to prevent data loss.

3. Budget Allocation (Where the ₱60,000 Goes)

Phase	Description	Cost
Development	Coding the custom POS logic, multi-branch architecture, and database.	₱40,000
Web Integration	Front-end website build + Online Ordering System + Investor Portal.	₱10,000
Deployment	Server setup, menu mapping, and on-site staff training.	₱5,000
Security & SSL	Deployment of encryption protocols to secure sales and customer data.	₱5,000
TOTAL		₱60,000

4. Operational Value (Documentation)

I. Accountability & Leakage Prevention

Because I am building the software, we can implement **Custom Audit Logs**.

- **Feature:** Every time a staff member applies a "Senior Discount" or "Void," the system logs a high-priority alert.
- **Investor Benefit:** Total visibility into "Internal Leakage," which traditionally costs un-systematized cafes 5-8% of gross revenue.

II. Scalability

Adding a new branch is "Plug and Play." The software is built as a template; a 5th or 10th branch can be added to the network for zero additional software cost.

5. Long-Term Financial Impact

Metric	Monthly Subscription Model	Your Custom "Nexus" System
Monthly Cost	₱3,500+ per branch	₱0
5-Year Cost (3 Branches)	₱630,000	₱60,000
Ownership	Rented (Stop paying = System stops)	Asset (Owned by Wildshakes)
